

COFFEE MACHINE WATER FILTERS

BWT Bestprotect filters provides excellent protection for the equipment used to produce hot drinks and kitchen equipment in the food service sector.

For example, natural water with a high salt content may cause corrosion problems or lead to scale and gypsum deposits (calcium sulphate). Bestprotect filter cartridges feature an exceptional filter medium and high-end BWT technology to

provide your machine technology with the best possible protection.

In addition, the cartridges are specially designed to achieve an optimum pH value and an excellent water mineral balance – both crucial factors in great-tasting coffee and espresso.

Benefits at a glance:

- Ideal for steam generation in combi steamers, ovens and steam cookers

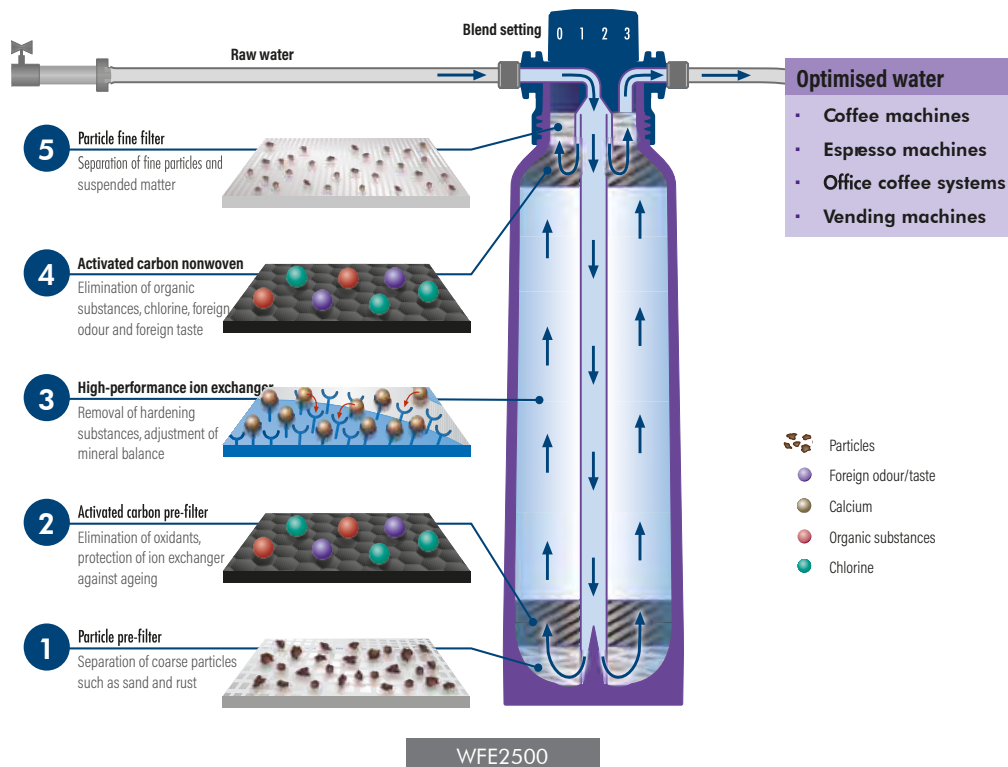

- Removes particles, flavour-inhibiting substances and the taste of chlorine from the water
- Protects expensive equipment and appliances against limescale and gypsum deposits
- Minimises the risk of corrosion by stabilising the pH value
